? Abstract:	[From equivalent EP0879536A1] To position advertising content in a telecommunication system, for example known throughout the world as the Internet, with a high level of acceptance by system users, it is proposed to transmit within a television signal which can be reproduced by a television receiver an address (HTTP) for a server program of the digital communication network. Optical signals are transmitted to the user on the screen of the television receiver in any form (in the form of a marking or plain writing). The address (HTTP) is evaluated at the command of the user to the effect that the content of the server program and other visual information which can be retrieved using the server program, in particular advertising-related information, can be reproduced on the screen of the television receiver. [French]

Claim:

[Show all claims](#) 1. A method for reproducing visual information in the form of writing, graphics and/or images, which are transmitted on the Internet, characterized in that an Internet address for a server program of the Internet is transmitted within a television program signal that can be reproduced by a television receiver as additional signal in a temporal correlation to the advertising content of the television program signal, and that it is reproduced together with the advertising content as marker on the television receiver screen, and that the Internet address is read out of the television program signal upon command from a viewer of the advertising content and is transmitted to a modem, connected to the television receiver, which modem establishes a communication link to the Internet under the read-out Internet address in order to reproduce the content of the addressed server program on the television receiver screen.
